THE hardware illustrated in this brochure shows the influence of some of the current thought in the architectural field. These examples of metal work produced by Sargent are characteristic of the movement away from traditional forms.

THE standard designs, which bear identifying trade numbers, are the work of Sargent designers, executed in the Sargent workshops by experienced metal workers whose craftsmanship is unexcelled. They can be supplied for any building.

AS new ideas in architectural form and expression develop, other hardware will be produced by Sargent to conform to the advancement of the times.

Door Knob and Escutcheon
in a proprietary design made especially for
the Union Trust Building, Detroit, Mich.

THE designs illustrated on this page, designated as proprietary, were conceived by architects for individual buildings and are shown as examples of special work.

For large and important work we are prepared to co-operate with architects in the production of hardware in special designs harmonizing with the architectural style of the building and carrying out the ideas of the architect.

IN harmony with the use in modern buildings of different metals and finishes, many of our designs can be supplied in bronze and brass in natural colors and in the established architectural finishes; also in white bronze—silvery in tone and the same color all through, chromium, and aluminum. Combinations of two metals or finishes can also be furnished in some of the designs.

"Union" Lock Set
in a proprietary design made especially
for the Fisher Building, Detroit, Mich.

Control of Keys Made Easy by the

SARGENT

Demountable Knob and Changeable Cylinder

This is an exclusive Sargent feature of great importance to the management of large buildings. Tenant changes, loss of keys, or in other cases where the exclusive control of a lock by known existing Keys is doubted, make the changing of the Cylinder of one lock or a series of locks imperative. This is simply and quickly accomplished by means of a release key (no tools required), permitting the cylinder to be removed and replaced with another of an entirely different tenant key change—thus guaranteeing the Key control of any lock.

The illustration shows the operation of removing or replacing the Knob on a **SARGENT** "Union" Lock with Demountable Knob and Changeable Cylinder with Release Key. The Lock does not have to be taken off the door.
